

ABSTRACT

Server assisted system for accessing web page fields comprising a wireless
Personal Data Assistant (PDA) communicating with the Internet by the intermediary
of a wireless Internet gateway and a portal server capable of accessing the
resources of the Internet such as servers. The portal server comprises a data base
containing at least identifying information enabling fields of web pages selected by
the user to be retrieved, and portal handling means for accessing the selected web
page fields, and the PDA comprises portal browsing means for browsing the
selected web page fields and retrieving at least one of them and display means for
displaying the retrieved web page field.
